

1 ABSTRACT OF THE DISCLOSURE

2 Embodiments include either a lower denture, an upper denture
3 without a palate or a set of dentures containing a layer of a
4 dental reline material. Ready made embodiments selected by an
5 edentulous individual user are fitted by immersion in warm water to
6 soften the reline material, fitting the denture within the mouth,
7 and exerting a biting force on the denture for a period of a few
8 minutes. In this time, the reline material conforms to the mouth
9 and gums of the individual user, providing a ready made denture
10 that can be fitted by the individual user without the necessity of
11 having impressions made and numerous fittings by a dental
12 professional.
